

Daiwa P.U.R.E. Energy Conference

- Power, Utilities, Renewables and Environment

3-7 January 2019
Daiwa's Hong Kong Office

After 20 years of investing in becoming the world's factory, China has earmarked CNY10tn to clean up its air, water and soil as part of its 13th Five-Year Plan. Prolonged haze in the north of the country has underlined the need for China to tackle its pollution issues and promote clean energy. Already, after the 19th National People's Congress earlier this year, China has stepped up its energy reform, with significant investments in gas infrastructure and exploration projects. The Daiwa P.U.R.E. Energy Conference will feature several companies from the natural-gas exploration, transmission and distribution, water and environmental, and renewable energy segments, each hand-picked to give investors the most up-to-date information and timely investment ideas.

Investor registration cut-off date: 7 December, Friday
